# AL-Rehman Technologies, Authorized solution partner for Google Postini Enterprise Email Solution

**POSTINI PERIMETER MANAGER FOR INSTANT MESSAGING** stops worms, viruses, and spam from reaching your network via instant messaging clients. Administrators can set instant messaging access policies, control outbound file transfers, filter conversations for inappropriate or sensitive content and archive instant messaging sessions for later searching and retrieval.

## The Power of Integrated Message Management—Only From Google Postini

As the global leader in Integrated Message Management, Postini protects more than **36,000 businesses worldwide** from a wide range of threats to critical communication channels, offers new secure means of communications, increases worker and IT productivity, dramatically reduces costs, ensures reliability and helps organizations decrease risk while at the same time improving regulatory and legal compliance.

Postini provides a single Integrated Message Management solution that combines email, instant messaging and web protection, archiving, encryption and message continuity—all managed through a unified web-based administrative interface. As an on-demand service, with Postini there is no software or hardware to buy, install, maintain or upgrade. Postini clients save as much as 90% compared to hardware or software solutions for message management and security.

Postini provides a complete suite of on-demand services that work together on a single platform, enabling you to instantly add services in any combination and on any scale that fits your needs. Messages are scanned for spam and viruses before being archived or encrypted. Users can search message archives from the same Message Center where they manage quarantined email and content policies can be applied to both email and instant messaging.

See how you can leverage Postini on-demand services to protect and manage your message systems.

Postini Integrated Message Management includes a comprehensive range of on-demand services that deliver the security, compliance, availability and visibility you need to make your vital business communications more productive, more trustworthy and more reliable.

# The Power of Postini to Stop Spam, Virus, Phishing and Worm Attacks

## The Challenge:

- Threats continue to accelerate as spammers and hackers exploit new methods to attack your communications infrastructure.
- Attacks are targeted against all of your electronic communications channels—email, instant messaging, the web, mobile devices and VOIP.

## The Solution:

Postini stops spam, viruses, phishing, directory harvest and other message attacks. As an on-demand service that protects your email, instant messaging and web systems, Postini's on-demand service mitigates risks based on expertise and experience that can't be matched by in-house resources.

Because of our scale, Postini is able to invest far more in redundant global data centers with massive on-demand capacity, bandwidth and storage than would be economically viable for most of our clients. Postini updates five separate layers of protection against spam, viruses and other malware continuously and in near real-time. The result is that Postini typically protects our clients from new threats days—even weeks—before the competition, guaranteeing 100% virus blocking and delivering 99.999% availability with 24x7 client support. Postini on-demand services provide results far superior to those from on-premises hardware or software solutions.

By choosing Postini Integrated Message Management you gain a proven, world-class threat management solution that provides:

- Email, messaging and web threat protection
- Anti-virus, anti-spam, anti-phishing and fraud prevention
- Real-time attack blocking
- 100% guarantee no viruses ever reach your network
- 99.999% availability and award winning customer support

*"We wanted a trusted, best-in-class, cost-effective, highly secure managed email security solution and Postini proved to be a great choice."*

*Brigitte Buchsrucker,  
Senior Specialist IS  
Architecture, BASF*

# The Power of Postini to Enforce Policy and Regulatory Compliance

## The Challenge:

- Electronic messages now account for 80% of an organization's records, and 75% of companies have been required to produce email in response to an external request (legal discovery or financial audit). (Radicati Group, 2006)
- SEC 17a-4 requires public companies to retain electronic records and messages for five to seven years. Financial Services Authority and NASD Broker Dealer require rigorous electronic communications and retention mandates for financial service companies.
- HIPAA requires the protection of patient records to maintain privacy, including the encryption of messages transmitting these records.
- Supervising and controlling outbound message content has become essential to managing and reducing corporate liability.
- Unmanaged Internet surfing impacts productivity, slows enterprise networks, and increases the potential for intrusion and liability.

## The Solution:

Postini eliminates the management burden of disparate content management and message archiving systems by offering an independent, secure, offsite, accessible service that helps enforce business policies for:

- Message retention to satisfy compliance with business, industry and government regulations
- Legal readiness for discovery of archived communications
- Encryption to assure privacy of messages and protection of intellectual property
- Outbound content control to meet business and industry regulations
- Web monitoring and security to block access to inappropriate and malicious web sites

*"For many companies today, compliance is no longer a choice, but rather an unavoidable responsibility... Today, if a company is not retaining and managing its electronic records promptly, its top executives can be put behind bars for up to 10 years."*

*Radicati Group, 2005*

## The Power of Postini to Enhance Productivity

### The Challenge:

- The average knowledge worker sends and receives 25,000 legitimate emails per year, adding up to a corporate email increase from 9.7 billion in 2000 to 40 billion in 2006. (Radicati Group, 2006)
- Unchecked spam fills in-boxes with unwanted messages, making email nearly useless.
- “One size fits all” message security and management doesn’t work for diverse workplace user needs.

### The Solution:

More than 85% of all communications traffic on the Internet today is unwanted, malicious or offensive. Postini’s patented technology for integrated message management blocks this content before it ever reaches clients’ networks, saving valuable resources, increasing productivity and reducing costs.

Postini also helps make users more productive by enforcing compliance with corporate policies.

Postini improves employee productivity and reduces help desk overhead by granting users greater control over their own services. From one convenient web-based Message Center, users can access their own spam quarantines, search personal archives, restore deleted messages, adjust personal filters, maintain white- and blacklists, and control other settings, all without needing the help of an administrator.

Administrators are more productive because they have comprehensive control over how the integrated message management platform works from a single unified management console. Changes take effect in near real-time, allowing administrators to respond instantly to changing business needs. This dramatically improves productivity and response time, as Postini’s clients quickly become autonomous and can rapidly respond to company-specific threats, configuration changes or other business needs.

*“Spam was becoming a concern for some of our associates, consuming network resources and impacting the productivity of our employees. The Postini service has been easy to deploy and has required virtually no administration time on our part. Our employees have experienced a noticeable improvement in their email in-boxes.”*

*Dennis Bowman,  
Chief Information Officer,  
Circuit City*

# The Power of Postini to Secure Messages and Protect Confidential Information

## The Challenge:

- Communications between enterprises and their partners, contractors, regulators, remote employees and customers need to be protected from eavesdropping, tampering and theft.
- Businesses need to ensure that their intellectual property and sensitive, confidential and proprietary information remains safe and uncompromised
- Companies need to communicate with clients and consumers, but personal information must always be kept private.

## The Solution:

Postini provides a cost-effective, reliable and easy to use on-demand secure message delivery service for companies to encrypt communications with business partners, regulators, other organizations and even individuals.

Postini makes messaging more trustworthy and secure by making it easy and automatic to communicate using encrypted messages. With Postini, you can mandate the use of encrypted server to server connections with trusted business partners using the Transport Layer Security (TLS) messaging standard. And you can enable encrypted communications between your employees and individuals over the Internet using Postini's Message Security services.

Postini can also protect intellectual property by preventing employees from sending proprietary information outside of company networks by enabling administrators to block messages that contain specific content, including attachments and files. Postini allows businesses to ensure that their intellectual property and sensitive, confidential and proprietary information remains safe and uncompromised.

Postini makes encrypting messages easy and affordable by overcoming the complexity and costs associated with communicating securely—with trusted business partners, regulators, other organizations and even individuals such as customers, consultants and contractors. With Postini, companies can easily and cost effectively communicate securely with anyone, anytime.

*"Postini's Perimeter Manager was deployed to over 75% of our 8,000 plus employees within a short time period with a high rate of success. Since we don't have to spend valuable time managing and tuning filters, or updating a server with software releases, our technology support personnel are free to focus their time on the needs of our internal customers."*

*Craig Courter,  
Chief Technology Officer,  
Baker & McKenzie*

# The Power of Postini to Reduce Overhead and Operating Costs

## The Challenge:

- Organizations struggle with the growing costs and complexity of managing and maintaining multiple point products for message management and security. (IDC Essential Guidance, 2005)
- Organizations have strategic imperatives to free up IT resources to concentrate on core competencies.
- The constant cycle of hardware and software installation, upgrades and maintenance eats into administrative productivity.
- Organizations are forced to invest in unproductive extra capacity to process unwanted traffic and stay functional during attacks.

## The Solution:

As an on-demand service, with Postini there is no software or hardware to buy, install, maintain, or upgrade. Administrators use standard web browsers to manage the system, and users seamlessly continue to use their existing email, instant messaging and web software. This “software as a service” model helps Postini clients save as much as 90% compared to hardware or software solutions for message management and security.

Integrated message management is a natural fit with the on-demand service model, which is why leading analysts firms and tens of thousands of clients worldwide agree that Software as a Service is preferable to hardware or on-premises software for message security and management solutions.

Unlike traditional hardware or software solutions, going live with Postini integrated message management is nearly instantaneous. All administrators have to do is change email, instant messaging and web settings to redirect your company’s message traffic through Postini’s secure, global data centers—small businesses are up and running in minutes, and large enterprises can be in full production in days. There are no hidden costs, no integration charges, no people costs, no capital expenditures. Upgrades are automatic. It just works.

*“The results prove that by leveraging a services model, customers are not only able to save money on the total cost of ownership of an email security solution, but are able to increase security and scale their deployments more linearly than by purchasing software or appliance solutions that are installed at the customer location.”*

*An Evaluation of the TCO of Email Security Solutions, Frost & Sullivan, 2005*

# The Power of Postini to Assure Messaging Continuity

## The Challenge:

Messaging systems have become mission-critical for the modern enterprise. Messaging productivity, availability, quality and compliance are core issues for all businesses—organizations simply cannot function without reliable and trusted communications. Thus no business can afford to lose messaging continuity without severe consequences.

## The Solution:

Postini provides a 99.999% record of service availability, backed by the industry's leading **Service Level Agreement** that assures the reliability, availability and continuity of messaging systems.

Postini's redundant data centers located throughout the world provide instantaneous emergency capacity, failover and disaster recovery. Should local events render any primary Postini data center unavailable, communication flow instantly redirects to a dedicated continuity center in a separate geographic location, to assure there is no disruption of service or message loss. Postini Archive Manager can store copies of email and IM messages on secure, highly reliable offsite servers, ensuring availability in the event of even severe data loss on a client's system. Postini's integrated, Software as a Service (SaaS) platform allows administrators to enable new services with no disruption to users.

Addressing the needs of global businesses, Postini's end-user notifications are available in 14 languages, and Postini customer service and support is available 24x7 worldwide.

### POSTINI'S WORLDWIDE DATA CENTERS

Postini's secure global data centers feature massive on-demand capacity, bandwidth and storage plus deterministic failover and redundancy.

*"We don't have to worry about building resiliency into our email system because Postini takes care of it for us. If Postini detects a problem sending email streams to our primary center, it automatically rolls email traffic over to our secondary data center with no action required from us."*

*Kirk Gunn, IT Project Manager, Constellation Energy Group, Inc.*

# The Power of One Proven Management Solution —

## POSTINI IS THE LEADING ON-DEMAND SERVICE FOR INTEGRATED MESSAGE MANAGEMENT.

Postini protects businesses from a wide range of email, instant messaging and web threats, provides message archiving and encryption, and enables the management and enforcement of corporate policies to meet regulatory compliance requirements. Founded in 1999, Postini protects and manages electronic communications for more than 36,000 businesses worldwide, providing comprehensive, flexible and trusted on-demand services for messaging productivity, reliability, security and management.

### INTEGRATED

Postini provides integrated message services that utilize a unified interface, policy framework, and protection platform so that all services can be instantly and easily activated. In addition, Postini message management services integrate seamlessly with your existing IT infrastructure through open standards for directory synchronization, authentication and web services.

### TRUSTED

Postini integrated message management is uniquely suited to be delivered as an on-demand service, providing 99.999% availability with superior protection, higher reliability, increased productivity and decreased costs than is possible with hardware or on-premises software. Software as a service is simply a better way to address integrated message management.

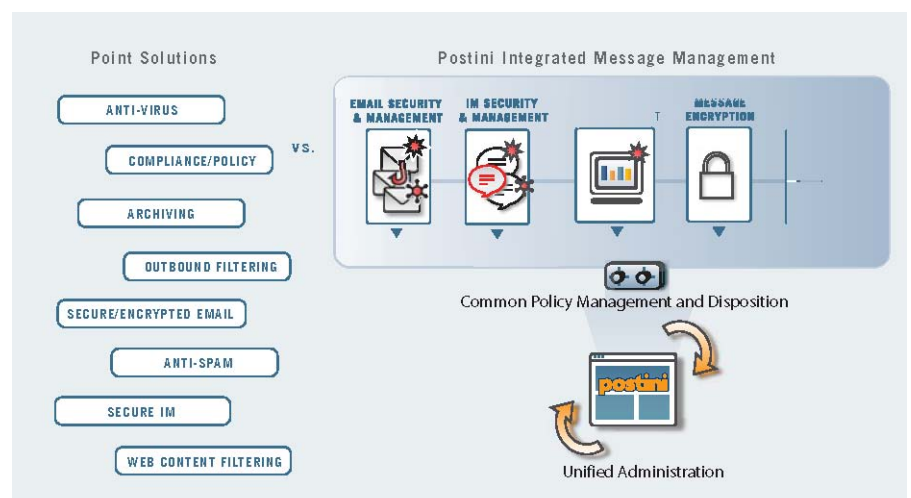

### REAL-TIME

Postini's patented platform processes all messages in real-time, adding no delays to critical message traffic. Administrative changes and user preference updates are reflected in near real-time.

*“When buying solutions look for comprehensive, unified, and integrated messaging security. An integrated solution will deliver greater effectiveness through multiple detection techniques, provide policy enforced messaging, and assure visibility with a single management view on how all security systems are working, regardless of network, location or mode.”*

*Robert Mahaowald,  
IDC Essential Guidance  
Webinar, April 2006*

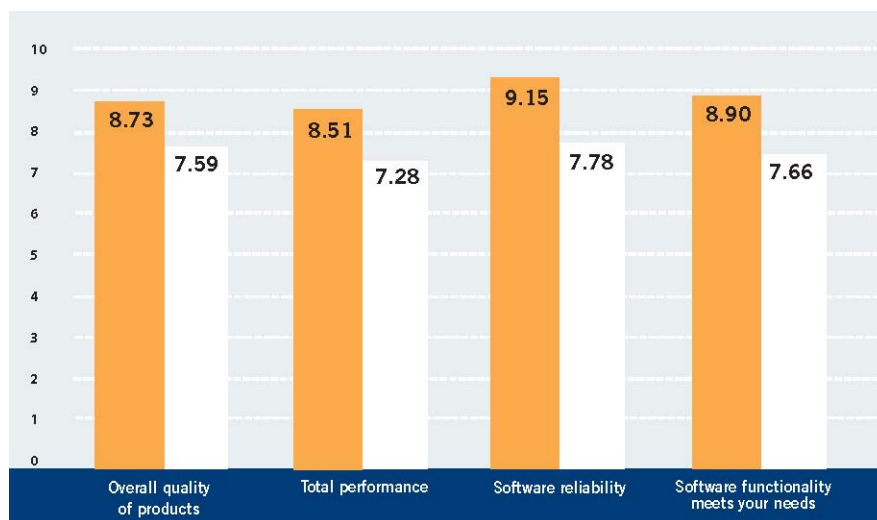

#### POINT SOLUTIONS vs. POSTINI'S INTEGRATED SOLUTION

Postini clients save up to 90% compared with companies using point solutions for message management.

# Integrated Message only from Postini

Overall Customer Satisfaction Survey: Product Performance Scores

## EFFECTIVE

Postini has been consistently rated as the top integrated message management provider in third party magazine, test lab, and analyst reviews.

## RELIABLE

With a track record of 99.999% availability, Postini currently processes more than 1 billion messages per day, more than all other on-demand message management and security providers combined.

## LOWER TOTAL COST OF OWNERSHIP

Postini clients save up to 90% compared with companies using on-premises software and appliance solutions for message management.

## AWARD WINNING GLOBAL SUPPORT

Postini's end-user notifications are available in 14 languages, and Postini's award winning customer service and support is available 24/7 worldwide.

## CLIENT SATISFACTION

Postini has achieved industry leading client-satisfaction, more than 95%, and is the trusted integrated message management partner for more than 36,000 businesses worldwide.

*"The thing about Postini is that it really delivers what it advertises. You always hear about a company saying we can do this and we can do that, but when Postini says it will eliminate your spam by 98%, it actually does it. In my 22 years of IT experience, I can only count on one hand how many companies actually deliver like that."*
